

# SIEMENS ESPREE 1.5T OPEN BORE MRI

- High field, open bore magnet. High field means it has a magnetic field strength of 1.5 Tesla (higher field strength means better image quality).
- Open bore means the opening in the magnet is larger, 10 cm larger, than traditional MRI systems, translating into more room and comfort in the magnet.
- The magnet is only 3 ½ feet deep resulting in 60% of examinations being performed with your head outside the magnet. This reduces feelings of claustrophobia.
- Our table weight limit is 550lbs, which is 200lbs greater than most MRI systems.
- The exam room includes several large visual displays that create a warm, friendly and relaxing environment.
- CAMIS performs all MRI examinations, (including MR arthrography and cardiac), with the exception of, temporomandibular joints, perfusion studies and breast.

Table weight limit is 550lbs
