

## FERTILITY PROGRAMS- UNINSURED SERVICES

Central Alberta Medical Imaging wishes to provide clarification for physicians and their patients with regards to the uninsured ultrasound services related to fertility programs. Except for the initial screening pelvic ultrasound to establish a diagnosis of the patient's condition, all subsequent ultrasound exams done in facilities outside of the fertility centre are uninsured. Therefore, patients are responsible for all expenses related to their ultrasound exam.

**Uninsured services related to fertility as listed in the Alberta Health and Wellness Schedule include but are not limited to:**

- Artificial Insemination
- Gamete intrafallopian transfer
- In vitro fertilization
- Ovarian stimulation and monitoring in association with assisted reproductive technologies
- Sperm transfer
